INDEX.

Agassiz, Professor, on distribution of fossils in mineral formations, 97.

Albumen, fibrin, and white matter of the globules of the blood proved to be identical, by Professor Liebig, 175.

American geology, in reference to erratic blocks and glacial action, 74.

Anderson, Dr Thomas, on new mineral species, 147.

Apples of Sodom, account of, 20.

Arran, isle of, the baryto-sulphate manufactory carried on there, described by Dr Traill, 139.

Arts, Society of, for Scotland, their proceedings, 189.

Atmosphere, the temperature of its lower strata considered, by Professor Marcet, 34.

Barry, Dr Martin, on the corpuscles of the blood, 196—on fibre, 393.

Baryto-sulphate of the island of Arran, its uses as a pigment, 139.

Belemnites on those of the lower chalk formations of the neighbourhood of Castellane, by M. Duval Jouve, 159.

Blood, on the corpuscles of, 196.

Cabool, tabular view of its trade, via Delhi, 358.

Charpentier, the Berghauptman, and his family, reminiscences of, 343.

Climate of Orkney, notice of, by Rev. C. Clouston, 193—of Jerusalem, 17.

Climatology, botanical, observations on, by M. A. de St Hilaire, 168.

Colladon, M. D., on the production and transmission of sound in water, in the Lake of Geneva, 91.

Coste, M., on fresh-water polypi, 70.

Daubree, M., on the deposition, composition, and origin of masses of tin ore, 154.

Desor, E., his account of the ascent of the Jungfrau in 1841, 291.

Diorama, a portable kind, described, by George Tait, Esq., advocate, 142.

Dufour, Leon, on physiology of insects, 127.

Dumeril, M., on the general movements of serpents, 235.

Dust and sand, showers of, falling on vessels traversing the Atlantic, 134.

Earthquakes of Great Britain, by D. Milne, Esq., 106—continued at page 362.

Ehrenberg, Professor, on beds of living infusoria in beds around Berlin, 153.
Electrical lights on bayonets, &c., 196.
Erratic blocks, observations on, 74.
Erichson, Dr W. P., on the classification of invertebrate animals, 278.
Freiberg, reminiscences of, by Professor Henry Steffens, 337.
Forbes, James, Professor, on the structure of glacier ice, 84—his observations on Dr Scoresby's paper on dew-drop, 391.
Furrows and scratches on rocks, as observed in Finland, 103.
Fyfe, And., M.D., &c. on the use of chlorine as an indication of the illuminating power of coal-gas, and on the comparative expense of light derived from different sources, 221.
Geological investigations and writings of Baron Alexander von Humboldt, by Professor Hoffman, 205.
Glaciers, observations on, 84, 74.
Goodsir, H. D. S. on new species of pycnogonidæ, 136.
Graham, Professor, on new or rare plants, 401.
Graphite—is it the metal of carbon? 152.
Greenock, Lord, Lieutenant-General, his translation of Kovanko's view of the environs of Pekin, 242.
Hausmann, Professor, on graphite, 152.
Humboldt, Baron, account of his geological investigations and writings, 205.
Jerusalem, observations on its general topography and climate, 13.
Infusoria, observations on, by Ehrenberg, 153.
Invertebrate animals, the classification of, by Dr W. P. Erichson, 278.
Italian scientific association held at Florence in September 1841, account of, 189.
Jungfrau mountain, account of the ascent of, on August 28, 1841, by M. Desor, 291-337.
Kilda, St., island of, described by John Macgillivray, Esq. 47.
——— additional notice of St Kilda, by James Wilson, Esq., F.R.S.E., 178.
Liebig, Professor, on Albumen, &c., 175.
Light, on the visibility of it in rapid motion, by Alan Stevenson, Esq., civil engineer, 270.
Macgillivray, John, his account of the island of St Kilda, 47.
Malte-Brun, the geographer, account of, 351.
Marcel de Serres on the discovery of a complete skeleton of the metaxytherium, 173.
Marcet, Professor, on the temperature of the lower strata of the atmosphere, 34.

Medusæ, their supposed stinging organs considered, by Professor Rudolph Wagner, 80.
Metaxytherium, account of skeleton of, 173.
Miasmata, tropical, observations on, 27.
Milne, David, Esq., F.R.S.E., &c., on earthquakes felt in Great Britain, 106, 362.
Morren, A., the influence of light, and the green-coloured substance in stagnant water, on the quality of the gases in the latter, 180.
Murchison, R. I., Esq., President of the Geological Society, his letter to M. Fischer de Waldheim, containing some of the results of his second geological survey of Russia, 99.
Musca, a species of, considered with the view of illustrating the history of metamorphoses, and the pretended circulation of inseets, by Leon Dufour, 127.
Musical instrument, new kind, described, 199.

Phosphorescence of zoophytes, by the Rev. D. Landsborough, 169.
Pekin, general view of its geology, by Major Kovanko, 242.
Pycnogonidæ, several new species described and figured, by Henry D. S. Goodsir, 136.

Robison, Sir John, his description of a new roofing tile, 390.
Ross, Capt. James, F.R.S., his notice of the magnetometric, geographical, hydrographical, and geological observations and discoveries made by the expedition under his command, 285.

Scoresby, Dr, his paper on the Dew-drop examined, by Professor Forbes, 391.
Serpents, their general motions described by M. Dumeril, 235.
Society, Wernerian Natural History, its proceedings, 185, 400—Geological, its proceedings, 185—of Arts, its proceedings, 189.
Sound, its propagation through water, illustrated by Mr Colladon, 91.
Sugar-cane, cultivation of in Spain, by T. S. Traill, M.D., &c., 256.
Steffens, Henry, Professor, notice of his geological writings, 355.
Stevenson, Alan, civil engineer, F.R.S.E., &c., notice of experiments regarding the visibility of lights in rapid motion, with a view to the improvement of lighthouses, and of some peculiarities in the impressions made by them on the eye, 270.
Stevenson, David, Esq., civil engineer, his hydrometrical observations, 382.

Tin ore, observations on its deposition, composition, and origin, 154.
Traill, Professor, on the baryto-sulphate of Glen Sannox in Arran, 139.
———, on the cultivation of the sugar-cane in Spain, 256.
Water, its freezing, remarks on, 198.
Werner, of Freiberg, reminiscences of, 337.

X. On a Remarkable Structure observed by the Author in the Ice of Glaciers. By James D. Forbes, Esq., Sec. R.S. Ed. Professor of Natural Philosophy in the University of Edinburgh. With a Plate. (Read to the Royal Society, Edinburgh, Dec. 1841.) Communicated by the Author, 84

XI. Experiments on the Production and Transmission of Sound in Water, made in the Lake of Geneva. By M. Daniel Colladon. In a letter to M. Arago, ... 91

XII. New Views regarding the Distribution of Fossils in Formations. By Professor Agassiz. With Observations, by Professor Bronn, . . . 97

XIII. Letter to M. Fischer de Waldheim, Ex-President of the Society of Naturalists of Moscow, from R. I. Murchison, Esq., containing some of the results of his Second Geological Survey of Russia. Transmitted by the Author, ... 99

XIV. On the Scratches and Furrows observed on the Rocks of Finland. With a Map, ... 103

XV. Notices of Earthquake Shocks felt in Great Britain, and especially in Scotland, with Inferences suggested by these Notices as to the Causes of the Shocks. By David Milne, Esq. F.R.S.E., M.W.S., F.G.S., &c. Communicated by the Author. (Continued from p. 309 of vol. xxxi.) . . 106

XVI. Anatomical and Physiological Studies of a Species of Musca, with the view of illustrating the History of Metamorphoses, and the pretended Circulation of Insects. By M. Leon Dufour, . 127

XVII. On Falls of Dust or Sand on vessels travelling the Atlantic, ... 134

XVIII. Descriptions of some New Species of Pycnogonidæ. By Henry D. S. Goodsir, Esq. Read before the Wernerian Society, March 1841. Communicated by the Author. (With a Plate.) . . 136

XIX. Account of the Arran Baryto-Sulphate Pigment. By Professor Traill. Read before the Wernerian Society, 11th December 1841. Communicated by the Author, ... 139

Page

XX. Description of a Portable Diorama, constructed by George Tait, Esq., Advocate. Communicated by the Royal Society of Arts for Scotland, . 142

XXI. Analyses of new Mineral Species. Communicated by Dr Thomas Anderson of Leith, . . 147

XXII. Is Graphite the Metal of Carbon? By Professor Hausmann of Gottingen, . . . 152

XXIII. A Notice by Humboldt regarding Ehrenberg's Discovery of Living Infusoria in Beds in and around Berlin, ... 153

XXIV. On the Deposition, Composition, and Origin of Masses of Tin Ore. By M. Daubree, as reported on by the French Academy of Sciences. (M. Dufrenoy, Reporter.) 154

XXV. Account of the Belemnites of the Lower Cretaceous Formations in the neighbourhood of Castellane. By M. Duval-Jouve, as reported on by the French Academy of Sciences, ... 159

XXVI. On certain kinds of Fishes and Reptiles which cannot be absolutely classed as either belonging to salt or fresh water. By M. Valenciennes, in a letter to M. Elie de Beaumont, . . 165

XXVII. Botanical Climatology—Comparative Note as to the Epochs of Vegetation in different Countries. By M. Auguste de Saint Hilaire, . . 168

XXVIII. On the Phosphorescence of Zoophytes. By the Rev. David Landsborough, M.W.S., of Stevenson, in Ayrshire, ... 169

XXIX. Notice on the Discovery of a complete Skeleton of Metaxytherium. By M. Marcel de Serres, 173

XXX. On the Identity of Albumen, Fibrin, and the White Matter of the Globules of Blood and of Caseum. Letter of M. Liebig. Communicated to the Academy of Sciences by M. Liouville, . . 175

XXXI. On the Causes of the Green Colour in certain kinds of Oysters. By M. A. Valenciennes, . 176

XXXII. Additional Notice regarding St Kilda. Communicated by the Author, ... 178
